Quick start

To edit documentation:

- Clone new project template
- Start development server run in PowerShell Invoke-Build Run . The command is syntax sugar for running docker containers.
- Add new documents somewhere in the source\docs hierarchy. To be visible in navigation,
 add to the path to the file in source\mkdocs.yml section nav, otherwise, the page is
 available via direct link.

To build static site run Invoke-Build Build.

This is a footer page, edit in inc/footer.md
